No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Molecular cloning of the testicular follicle stimulating horr

receptor of the non human primate Macaca fascicularis and

identification of multiple transcripts in the testis.";

Biochem. Biophys. Res. Commun. 196:1066-1072(1993).

-!- FUNCTION: Receptor for follicle stimulating hormone. The of this receptor is mediated by G proteins which activate adenylate cyclase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MACFA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PIR; A69131; A69131.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -!- CATALYTIC ACTIVITY: NADH + 2 Fe(3+) = NAD(+) + 2 Fe(2+).
-!- COFACTOR: FAD (Probable).
-!- SUBCELULAR LOCATION: Integral membrane protein (Potential).
-!- SIMILARITY: Belongs to the FRE / CYBB family.
